‘Reciprocal’ mainstreaming

Biodiversity and poverty reduction are intrinsically linked and demand an integrated approach.

Achieving both sustainably requires integration in both directions - ‘reciprocal mainstreaming’.

Ensures that biodiversity is better managed and development benefits are realised.

Problem: supply but little demand

‘Supply-driven’ mainstreaming: biodiversity stakeholders promote BD value in ways that don’t attract development stakeholders

Lessons from **other kinds of mainstreaming:**

- Highlight BD issues relevant to the poor
- Engage mainstream decision makers
- Aim at dev plans and budget processes
- Present evidence that interests them – rates of return on investment, jobs created, risk...

Desired outcomes

NBSAPs need to be ‘development-proofed’ – work on demand side

NBSAPs should offer an institutional ‘wiring diagram’ for integrating biodiversity and development concerns

Solid platform for use of BD mainstreaming tools such as NR accounting, PES, REDD (supply side)

Potential and opportunity

Development actors explore the particular contributions of BD to their priorities

NBSAP revision process as an *entry point*...

Why now?

NBSAPs 2.0

MAINSTREAMING BIODIVERSITY AND DEVELOPMENT

A three-year project to build resilient and effective National Biodiversity Strategies and Action Plans that influence development decisions and improve outcomes for biodiversity and poverty.

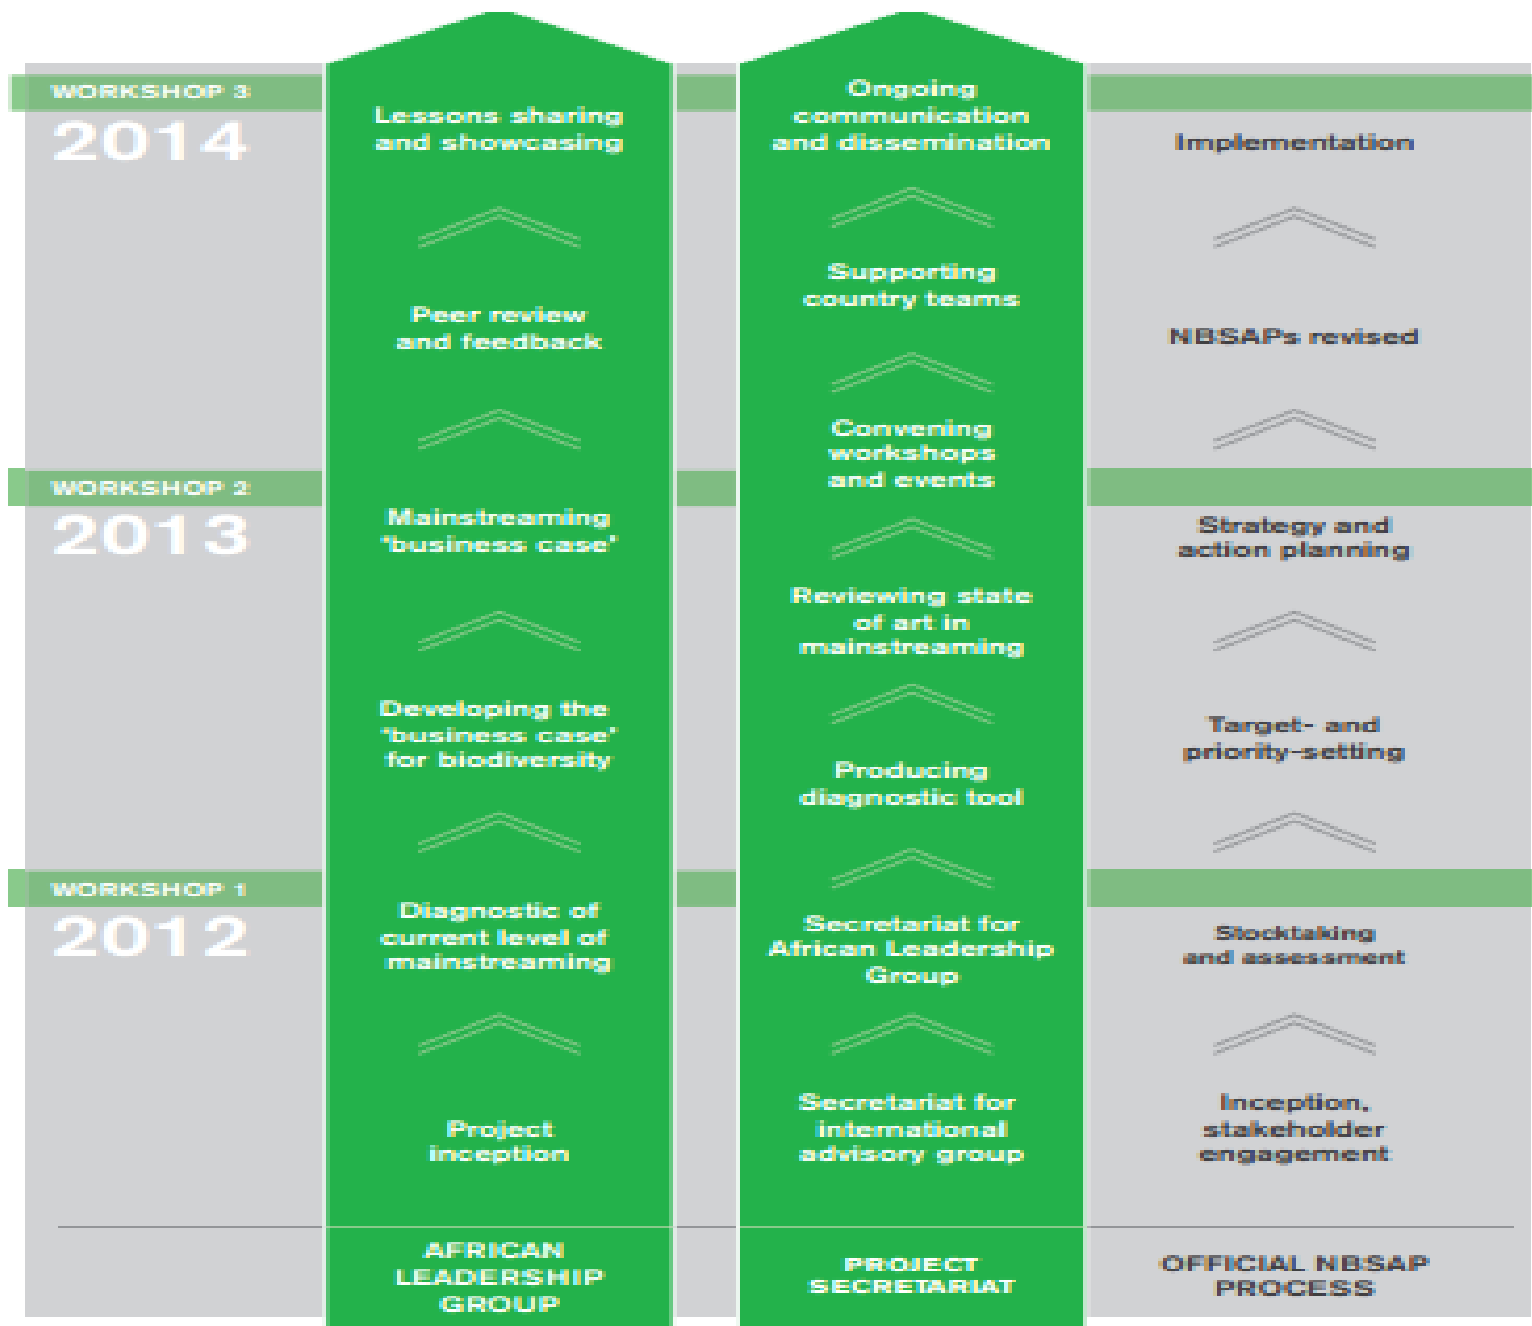

Through research, dialogue and action over three years, the NBSAPs 2.0 project aims to achieve:

Better
development

Better
conservation

Better outlook

Who's who in the project?

Botswana: Ministry of
Environment, Wildlife and
Tourism

Namibia: Ministry of
Environment & Tourism

Seychelles: Ministry of
Environment, Natural Resources
and Transport

Uganda: National Environment
Management Authority

PEI in Botswana and Uganda

UNDP Country Offices

The CBD Secretariat

UNEP-WCMC

IIED

UNEP

UNDP

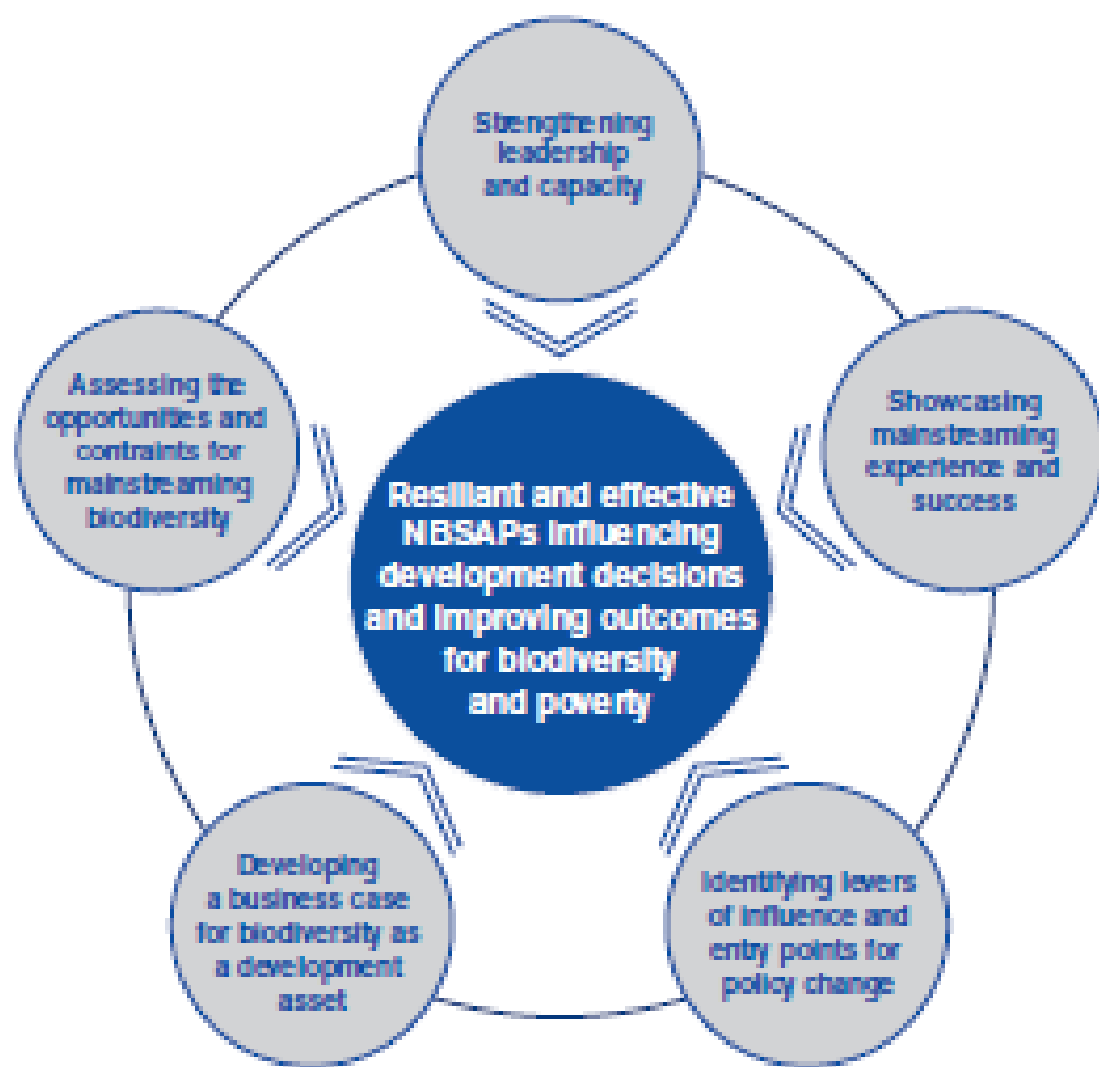

NBSAP Forum

Poverty Environment
Initiative

Darwin Initiative

DfID / UKAid

By COP12 we will have delivered...

African national plans

International guidance

Tools and resources

An African network

Biodiversity mainstreaming diagnostic tool

Understand what progress has been made

Map and analyse the approaches that have been adopted

Assess how institutional structures and procedures support or inhibit biodiversity mainstreaming

Examine performance — internally and ‘on-the-ground’

Identify areas for change and improvement
